6 On- Screen-Menu

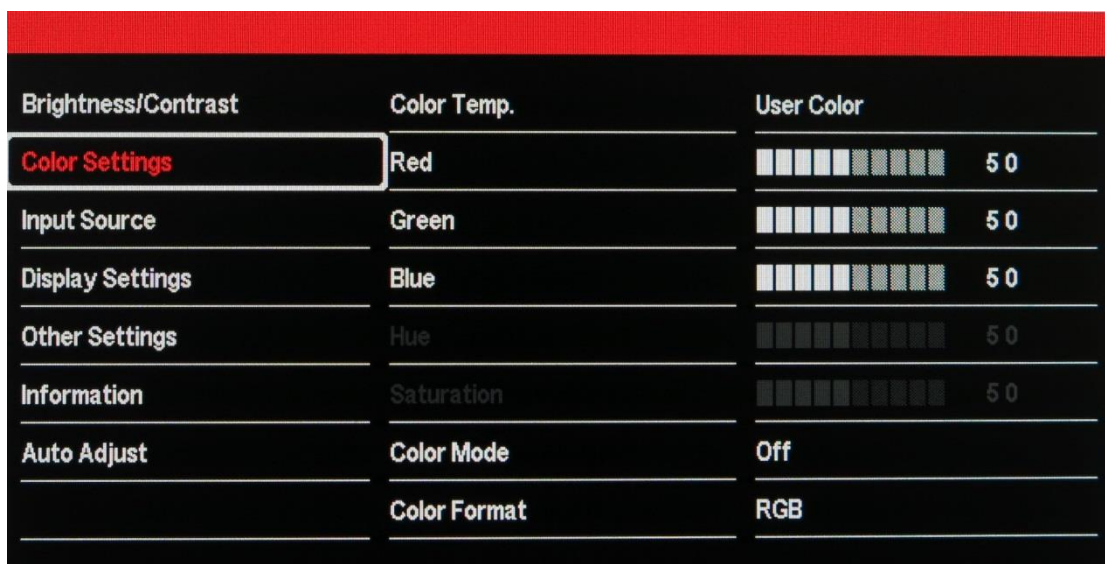

6.1 Brightness/Contrast Tab

Brightness: Brightness of the image can be controlled using this function, with left and right buttons after the brightness slider is selected. This function modifies RGB data to change the brightness.

Contrast: Allows <Contrast> adjustment in the Y domain. The modification affects all color channels and all input types and is a direct multiplication of the Y data after YUV black level adjustment.

6.2 Color Settings Tab

Color Temp: Allows selection of different color temperature schemes, predefined and custom. Available if the color space of the input is RGB.

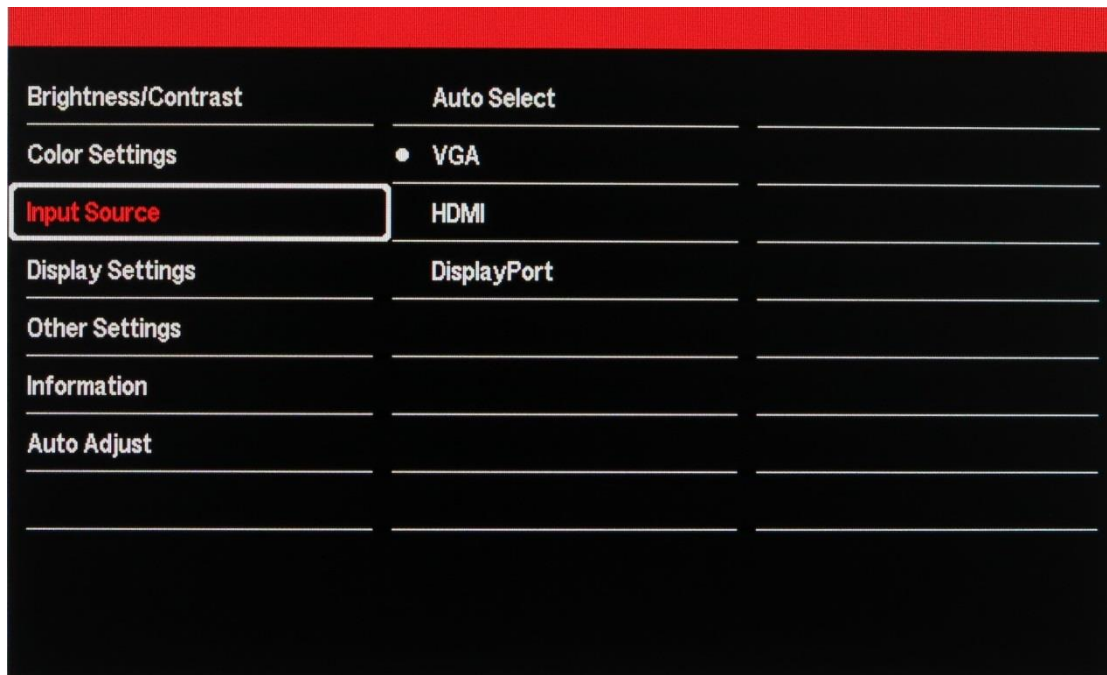

Red, Green, Blue: Control the amount of the corresponding color components in the displayed image.

Hue: Allows <Hue> adjustment in the UV domain. The modification affects all color channels and all input types. Available if the color space of an input is not RGB.

Saturation: Allows <Saturation> adjustment in the UV domain. The modification affects all color channels and all input types. Available if the color space of an input is not RGB.

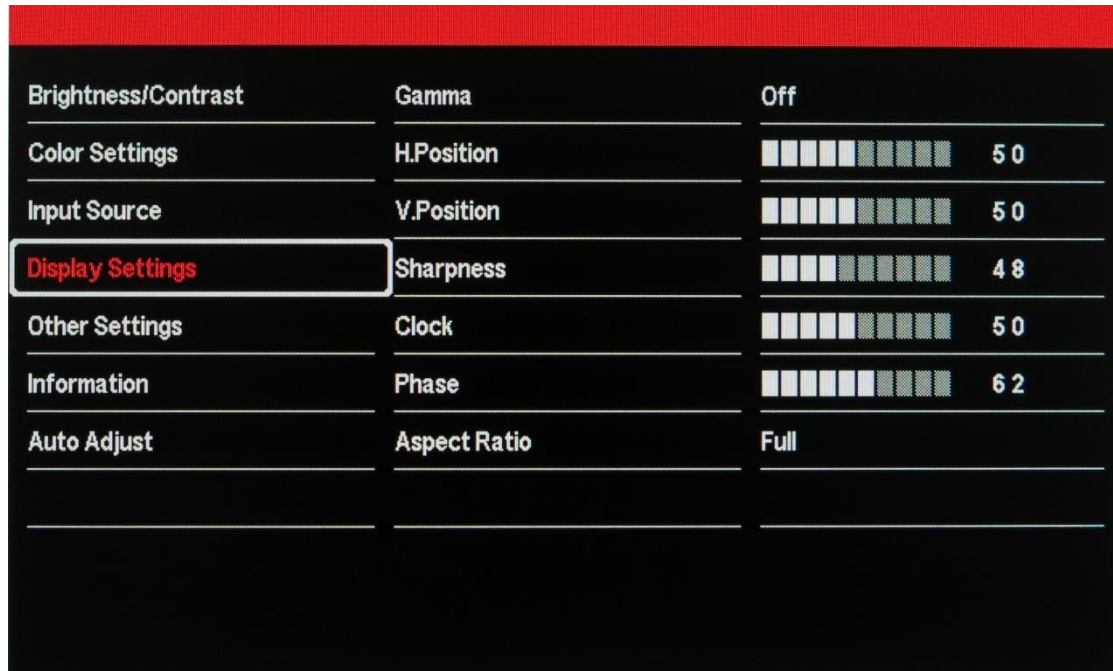

Color Format: Switches between RGB and YUV color spaces.

6.3 Input Source Tab

Enables the manual selection of the input source, **Auto Select** enables / disables input auto-detection
