GENERAL DESCRIPTION

DESCRIPTION

LTI700HA02-0 is a color active matrix liquid crystal display(LCD) that uses amorphous silicon TFT(Thin Film Transistor) as switching components. This model is composed of a TFT LCD panel, a driver circuit, and a back-light unit. This 70.0″ model has a resolution of 1,920 x 1,080 pixels (16:9) can display up to 16.7 Million colors with the wide viewing angle of 89° or higher in all directions.

FEATURES

RoHS compliance(Pb-free)
FHD(1,920X1,080) resolution(16:9)
SPVA(Super Patterned Vertical Align) mode
High Tni(85℃) Liquid Crystal
High speed response
High contrast ratio, High aperture ratio with the wide color gamut
Wide viewing angle(±178°)
Landscape only compatible
LVDS(Low Voltage Differential Signaling) Interface(2pixel/clock)
DE(Data Enable) mode
Bar Type Edge LED(Light Emitting Diode)
Low power consumption
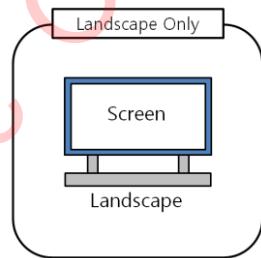

APPLICATIONS

Public Information Display(PID)
High Definition Public Monitor

GENERAL INFORMATION

Item	Specification	Unit	Note
Display area	1549.44 (H) x 871.56 (V)	mm	
Driver Element	a-Si TFT active matrix		
Display colors	16.7M (8bit)		
Number of pixel	1,920 x 1,080	Pixel	
Pixel Arrangement	RGB Vertical stripe		
Display Mode	Normally Black		
Surface treatment	Haze 2.3% / 2H		Anti-Glare
Luminance of White	400(Typ)	cd/m^2

Shock(non-operating)	Snop(X,Y,Z)	-	-	G	(3)
Vibration(non-operating)	V_{nop}	-	-	G	

Note(1) Temperature and relative humidity range are shown in the figure below.
  a. 90% RH Max(Ta ≤ 39°C)
  b. Relative Humidity is 90% or less(Ta > 39°C)
  c. No condensation
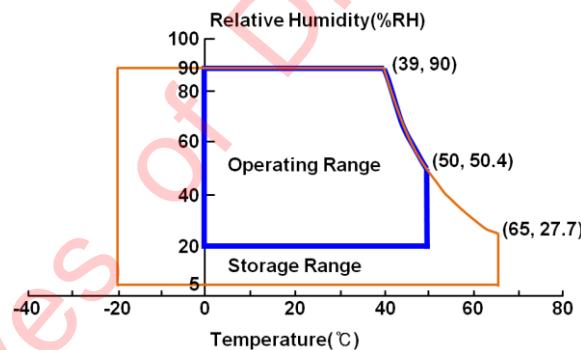

Note(2) Definition of test point
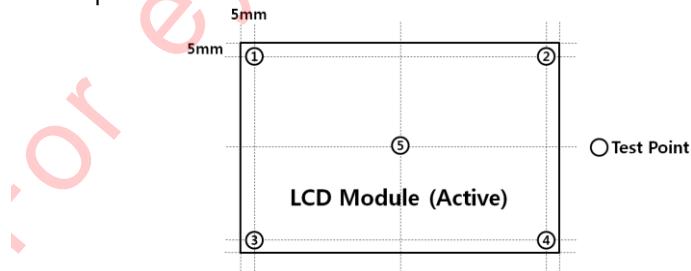

△T should be less than 10℃ (∆T = |T_{CENTER} − T_{CORNER}|)
T_{CENTER} : Temperature of the center of the glass surface (Test point 5)
T_{CORNER} : Temperature of each edge of the glass surface (Test point 1~4)

Note(3) Vibration and shock tests are not guaranteed due to limitation of equipment for this model.

1.2 ELECTRICAL ABSOLUTE RATINGS

(1) TFT LCD MODULE

Item	Symbol	Min	Max	Unit	Note
Power Supply Voltage	VDD	10.8	13.2	V	(1)
Dimming Control	V_{Dim}	0	5.25	V	-

(2) BACKLIGHT UNIT(LED Unit)

Item	Symbol	Min	Max	Unit.	Note
Input Supply Voltage	V_{CC}	-	26.4	V	(1)

Note(1) Ta= 25 ± 2 °C

The permanent damage or defect to the device may occur if the panel is operated at the figure set, which exceeds a ceiling of maximum value stated in the former spec. The functional operation should be limited to the conditions described above under normal operating conditions.

1.3 THE OTHERS ABSOLUTE RATINGS

Static Electricity Pressure Resistance

Item	Test Conditions	Remark
Contact Discharge	150pF, 330Ω, ±10kV, 200points, 1time/point	Operating
Air Discharge	150pF, 330Ω, ±20kV, 200points, 1time/point	Operating

2. APPLICATION INFORMATION FOR PID
(Public Information Display)

A PID's screen may display the sudden image such as an image retention.
To extend the lifetime and optimize a function of module, the below-mentioned operating conditions are required.

2.1 Normal operating condition
a. Temperature: 20 ±15℃
b. Humidity: 55 ±20 %
c. Display pattern: Moving image or image, which switches regularly.
   Note) The sudden image on the screen can be displayed after the static image is shown in the long-term.

2.2 The operating conditions when the module is operated under the abnormal condition.
a. Ambient condition
   -It is recommended to set the PID up in the well-ventilated place.
b. The function of power off and screen saver
   -The function of periodical power-off or a screen saver is needed when the static image is displayed in the long-term.

2.3 Operating conditions to prevent the sudden display resulted from displaying the static image in the long-term.
a. The proper operating time: Under 12 hours a day.
b. The moving image shall be inserted between the static displays periodically.
   -The refresh time for liquid crystal is needed.
c. The periodic changing of background color and character's color(image)
   -Use the different color for background and character(image) respectively.
   -Change colors periodically.
d. Avoid combining the color for background with the color for character, which has a largely different luminance.
   Note (1) Abnormal condition means all operating condition except normal operating condition.
   Note (2) The moving image or black pattern is strongly recommended as a screen saver.

2.4 Only the lifetime of PID stated in this spec is guaranteed if the PID is used under the proper operating conditions.

2.5 Clean the system regularly for not accumulating the dust around the system considering user environment, otherwise, its reliability and function may not be satisfied.

3. OPTICAL CHARACTERISTICS

The optical characteristics should be measured in a dark room or equivalent.
Measuring equipment : TOPCON RD-80S, SR-3, ELDIM EZ-Contrast

Note (1) Test Equipment Setup

The measurement should be executed in a stable, windless and dark room between 40min and 60min after lighting the backlight at the given temperature for stabilization of the backlight. This should be measured in the center of screen.

LED : I_F=160mA (Per String)
Environment condition : Ta = 25 ± 2 °C

Note(2) Definition of test point
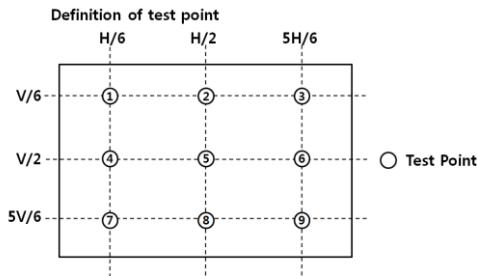

Note(3) Definition of Contrast ratio(C/R)

: Ratio of max.gray(Gmax) & min.gray(Gmin) at the center point ⑤ of the panel.

$$C/R = \frac{G\max}{G\min}$$

Gmax : Luminance in all white pixels
Gmin : Luminance in all black pixels.

Note(4) Definition of brightness uniformity at 9 points(Test pattern : Full white)

$$Buni = 100 * \frac{(B\max - B\min)}{B\max}$$

Bmax : Maximum brightness
Bmin : Minimum brightness

Note(5) Definition of Response time : Average response time of all Gray to Gray except Tr, Tf
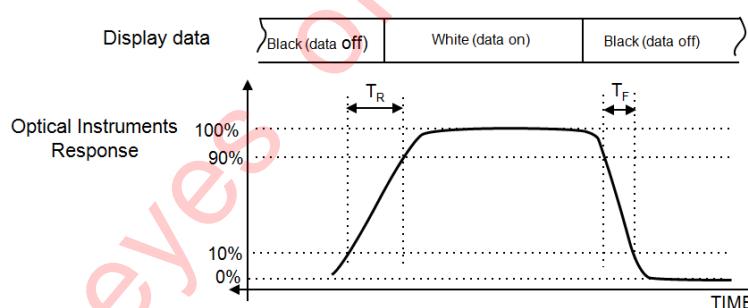

※ G-to-G : Average response time between the whole gray scale to the whole gray scale.

T_{OFF}										

(Note: T_{ON} appears to the right of the 255 End column)

T*(X-Y) : Response time from level of gray at X to level of gray at Y
The definition of response time = Σ [T*(X-Y)] / 72

Note(6) Definition of Luminance of White : Luminance of white at center point ⑤

Note(7) Definition of Color Chromaticity (CIE 1931)
        Color coordinate of Red, Green, Blue & White at center point ⑤

Note(8) Definition of Viewing Angle : Viewing angle range(C/R ≥ 10)
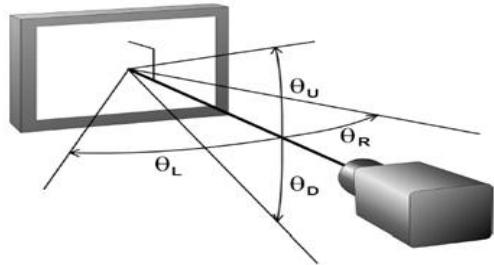

4. ELECTRICAL CHARACTERISTICS

4.1 TFT LCD MODULE

The connector to transmit a display data and a timing signal should be connected.

Note(1) The ripple voltage should be controlled under 10% of V_{DD}.

Note(2) f_V=60Hz, f_{DCLK}=148.5MHz, V_{DD}=12.0V, DC Current.

Note(3) The pattern for checking the power dissipation(LCD module only).

a) Black Pattern	b) White Pattern	c) Sub-V-Stripe-pattern
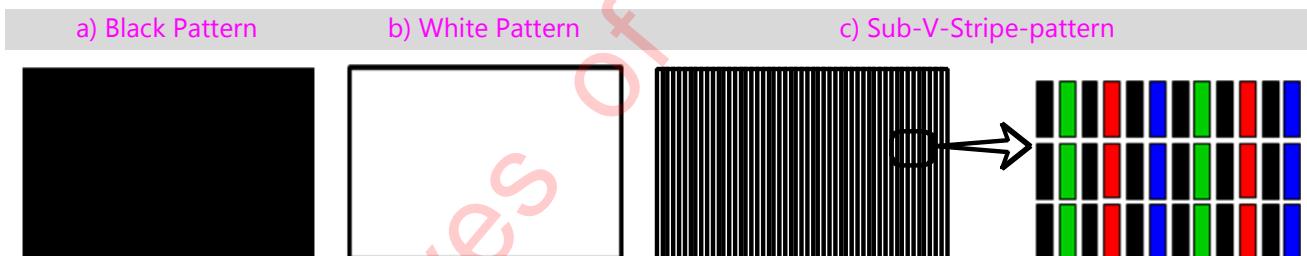

Note(4) Conditions for measurement

T_{RUSH}=470μs
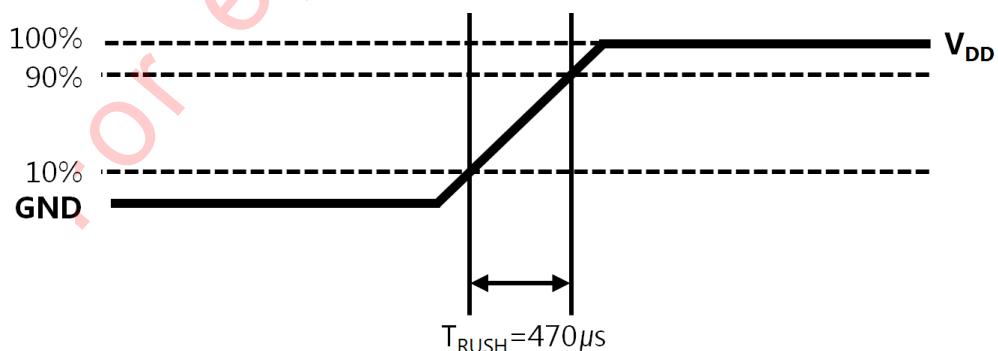

The rush current, I_{RUSH} can be measured when T_{RUSH} is 470μs.

4.2 BACKLIGHT UNIT

The back light unit contains Bar type 216 LEDs (Light Emitting Diode).
The characteristics of BLU are shown in the following tables.

Ta = 25 ± 2 °C

Item	Symbol	Min.	Typ.	Max.	Unit	Note
Operating Life Time	Hr	-	50,000	-	Hour	(1)

Note(1) It is defined as the time to take until the brightness reduces to 50% of its original value.

6.4 THE SEQUENCE OF POWER ON AND OFF

To prevent the product from being latched up or the DC in the LCD module from starting an operation, the order to turn the power on and off should be changed to the order as shown in the diagram below.

$0.5msec \leq T1 \leq 10msec$

$10msec < T2 \leq 50msec$

$0 < T3 \leq 50msec$

$1000msec \leq T4$

$1000msec \leq T5$
(Recommend Value)

$100msec \leq T6$
(Recommend Value)
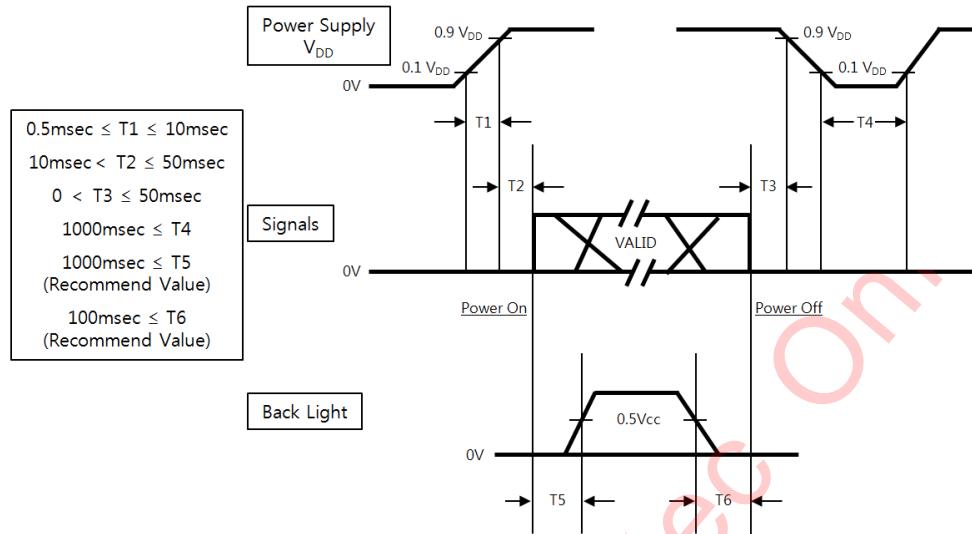

| Timing	Remarks
T_1	The time, during which the level of V_{DD} is rising from 10% to 90%.
T_2	The changing time, during which the V_{DD} starts rising beyond 90% until the valid data of signal started coming in.
T_3	The changing time, during which the valid data of signal starts leaving out until the V_{DD} starts falling below 90%.
T_4	The changing time, during which the V_{DD} starts falling below 10% to restart the Windows.
T_5	The changing time, during which the signal of BLU starts rising beyond 50%.
T_6	The changing time, during which the signal of BLU starts falling below 50%.

- The inputted V_{DD}'s value for supply voltage, BLU, and signal to the external system of the module shall be computed with referring to the former mentioned value.
- The method to apply the voltage to the LED within the range, which the LCD operates. When the back-light is turned on before the LCD is operated or the power of LCD is turned off before the back-light is turned off, the abnormal display on the screen may be shown momentarily.
- Please keep the level of input signal low or keep the level of impedance high when the value of V_{DD} is below 10%.
- The value shall be measured after the module has been fully discharged between the period, which the power is turned on and the period, which the power is turned off like the T4 timing. The backlight may be flashed if the interface signal remains floated when the above-mentioned signal becomes invalid.

11. GENERAL PRECAUTIONS

11.1 HANDLING

(a) When the module is assembled, It should be attached to the system firmly using every mounting holes. Be careful not to twist and bend the modules.

(b) Refrain from strong mechanical shock and / or any force to the module. In addition to damage, this may cause improper operation or damage to the module and LED back-light.

(c) Note that polarizers are very fragile and could be easily damaged. Do not press or scratch the surface harder than a HB pencil lead.

(d) Wipe off water droplets or oil immediately. If you leave the droplets for a long time, Staining and discoloration may occur.

(e) If the surface of the polarizer is dirty, clean it using some absorbent cotton or soft cloth.

(f) The desirable cleaners are water, IPA (Isoprophyl Alcohol) or Hexane. Do not use Ketone type materials (ex. Acetone), Ethyl alcohol, Toluene, Ethyl acid or Methyl chloride. It might permanent damage to the polarizer due to chemical reaction.

(g) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth. In case of contact with hands, legs or clothes, it must be washed away thoroughly with soap.

(h) Protect the module from static. it may cause damage to the C-MOS Gate Array IC.

(i) Use fingerstalls with soft gloves in order to keep display clean during the incoming inspection and assembly process.

(j) Do not disassemble the module.

(k) Do not pull or fold the LED wire.

(l) Do not touch any component which is located on the back side.

(m) Protection film for polarizer on the module shall be slowly peeled off just before use so that the electrostatic charge can be minimized.

(n) Pins of I/F connector shall not be touched directly with bare hands.

11.2 STORAGE

We highly recommend to comply with the criteria in the table below.

ITEM	Unit	Min.	Max.
Storage Temperature	(℃)	5	40
Storage Humidity	(%rH)	35	75
Storage Life	12 months		
Storage Condition	- The storage room should be equipped with a good ventilation facility, which has a temperature controlling system. - Products should be placed on the pallet, which is away from the wall not on the floor. - Prevent products from being exposed to the direct sunlight, moisture, and water. Be cautious not to pile the products up. - Avoid storing products in the environment, which other hazardous material is placed. - If products are delivered or kept in the storage facility more than 3 months, we recommend you to leave products under the condition including a 20℃ temperature and a humidity of 50% for 24 hours. - If you store semi-manufactured products for more than 3 months, bake the products under the condition including the 50℃ temp. and the 10% humidity for 24hrs after being used.		

11.3 OPERATION

(a) Do not connect or disconnect the cable to/ from the module at the "Power On" condition.

(b) The power shall be always turned on/off by the item 6.4. "Power on/off sequence"

(c) The module has a circuit with a high frequency. The system manufacturers shall suppress the electromagnetic interference sufficiently. The methods to ground and shield are important to minimize the interference.

(d) Design the length of cable to connect between the connector for back-light and the converter as short as possible and the shorter cable shall be connected directly.

The longer cable between that of back-light and that of converter may cause the luminance of LED to lower and need a higher startup voltage(Vs).

11.4 OPERATION CONDITION GUIDE

(a) The LCD product should be operated under normal conditions.

Normal condition is defined as below;

- Temperature : 20±15℃

- Humidity : 55±20%

- Display pattern : continually changing pattern(Not stationary)

(b) If the product will be used in extreme conditions such as high temperature, humidity, display patterns or operation time etc.., It is strongly recommended to contact SDC for Application engineering advice. Otherwise, its reliability and function may not be guaranteed. Extreme conditions are commonly found at Airports, Transit Stations, Banks, Stock market, and Controlling systems.

11.5 OTHERS

(a) Ultra-violet ray filter is necessary for outdoor operation.

(b) Module should be turned clockwise(regular front view perspective) when used in portrait mode.

(c) Avoid condensation of water. It may result in improper operation or disconnection of electrode.

(d) Do not exceed the absolute maximum rating value.(supply voltage variation, input voltage variation, variation in part contents and environmental temperature, and so on) Otherwise the Module may be damaged.

(e) If the Module keeps displaying the same pattern for a long period of time, the image may be "sticked" to the screen. To avoid image sticking, it is recommended to use a screen saver.

(f) This Module has its circuitry PCB's on the rear side and should be handled carefully in order not to be stressed.

(g) Please contact SDC in advance when you display the same pattern for a long time.
